

THE KDF GUIDE TO

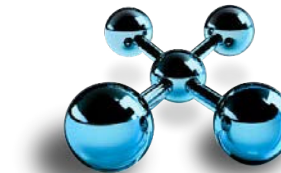

PVD COATING COLORS

OVERVIEW

What are color PVD coatings?

Color PVD finishes increase your product's value, streamline operations, and cost just \$1/part.

Physical vapor deposition (PVD) finishes, also called vapor deposition coatings, are created by vaporizing solid metal in a vacuum chamber, then reacting it with gases like nitrogen, oxygen, or carbon. The resulting atoms then condense onto parts to deposit microns-thin, durable, wear resistant metallic finishes on consumer or industrial products.

Our coating recipes, created using specific material and gas configurations, determine the finish colors, which come in extensive array of classic, vivid, and premium colors.

What are color PVD coatings used for?

These durable/decorative finishes add durable, wear-resistant metallic colors to consumer products

COMMON APPLICATIONS

- Door hardware
- Kitchen and bath fixtures
- sporting goods/outdoor sports
- Automotive trim
- Jewelry
- Consumer electronics
- Other consumer products

What colors do PVD coatings come in?

Choose from a rainbow of PVD color coatings to enhance your product's appearance and durability.

COLOR SELECTION

- Natural metal colors
- Vivid bolds (not seen in nature)
- **Signature Collection**
